DO THE TWIST

LA County Choprods' new internal throttle unit (\$185) now uses a slide plunger with two thread-in double ball bearing pin and bearing assemblies. The aluminum outer tube has two spiral travel grooves and has been lengthened to close the inner end of the travel grooves. This will eliminate the possibility of misshaping the tube when your handgrip setscrews are tightened. Both the outer tube and the slide plunger are hard-anodized. All this provides for smoother operation and longer life. Info: LA County Choprods, 310/353-2467, www.LAChoprods.com.
